Rystad Energy UK Ltd

Recruiting Team – Management Consulting Practice
London, United Kingdom

Subject: Application for Management Consultant Intern – Summer 2027 (London)

Dear Rystad Energy Recruiting Team,

I am writing to express my strong enthusiasm for the Management Consultant Intern – Summer 2027 position in London. As a penultimate-year BSc student in Psychology and Language Sciences at University College London (UCL) on track for First-Class Honours, I combine advanced training in empirical statistics and machine learning workflows with certified expertise in process intelligence and enterprise operations. Rystad Energy's mission—delivering high-conviction strategic advisory and data transparency to lead the global energy transition—represents the exact cross-section of data rigor and commercial impact where I aspire to build my career.

My academic and research experience directly mirrors the analytical problem-solving demanded in strategy consulting. As a Research Assistant at the University of Oklahoma, I engineered an end-to-end automated literature retrieval and LLM classification pipeline across 700+ empirical studies, establishing an inter-rater reliability of $\kappa = 0.98$ through iterative false-positive audits. Furthermore, I constructed structured relational datasets coding multi-dimensional organizational variables and formulated moderated-mediation statistical models in R. This experience taught me how to synthesize vast, unstructured information into transparent, hypothesis-driven business conclusions under strict deadlines.

Complementing my empirical research, I completed the **Mastercourse in Process Intelligence & Enterprise AI by Celonis**, mastering process mining methodologies, digital twin modeling, and workflow bottleneck optimization. Combined with my **Google Data Analytics Professional Certificate** (SQL, R, Tableau), I bring the technical fluency required to extract actionable commercial insights from Rystad's comprehensive energy databases, whether analyzing decarbonization trajectories, capital expenditure trends, or asset portfolio economics.

Beyond quantitative analysis, my military service as a **Sergeant and Squad Leader in the Republic of Korea Army** provided rigorous real-world leadership and operational discipline. I led a 25-person squad, coordinating logistics and service operations across 5 separate military units to deliver 800+ meals daily with zero service disruptions. This taught me operational poise, stakeholder alignment across complex hierarchies, and relentless accountability—qualities that translate directly into delivering high-stakes consulting engagements for client executive teams.

Rystad Energy's reputation as the premier independent intelligence engine for the energy sector is unmatched. I would welcome the opportunity to contribute my data architecture skills, process mining foundation, and disciplined work ethic to your London consulting team in Summer 2027.

Thank you for your time and consideration.

Sincerely,
Kyubin Yun
