To: Early Careers Talent Acquisition Team, Temasek

Role: 2027 Summer Internship Programme (London)

Date: 14 September 2026

Dear Hiring Team at Temasek,

I am writing to apply for the **2027 Summer Internship Programme** at Temasek London. As a penultimate-year undergraduate reading Psychology and Language Sciences at University College London (UCL, predicted First-Class Honours, current average 70.5), I combine computational data engineering, cognitive science, and disciplined leadership to evaluate secular inflection points across Temasek's structural investment themes: **Digitisation** and the **Future of Healthcare & Life Sciences**.

Temasek's generational investment horizon and commitment to sustainable stewardship set it apart as a premier global institution. While short-term market participants react to cyclical noise, Temasek's thesis-driven approach requires constructing deep, domain-grounded perspectives on how disruptive technologies transform societies. My cross-disciplinary profile—uniting experimental neurobiology, human factors, and automated machine-learning pipelines—provides an agile, differentiated framework for identifying enduring value in digital health, enterprise intelligence, and emerging bio-computing frontiers.

In my research fellowship with the University of Oklahoma, I engineered an automated multi-agent data classification pipeline in Python across 700+ complex empirical studies, attaining $\kappa = 0.98$ inter-rater agreement by designing strict quality-control bounds to prevent semantic overfitting. Concurrently, completing Celonis's Mastercourse in Process Intelligence & Enterprise AI provided me with practical expertise in analyzing enterprise execution graphs and quantifying AI-driven productivity gains. This allows me to evaluate technology targets not through superficial narratives, but by verifying their underlying operational data integrity and structural unit economics.

Complementing my academic and technical pursuits, my 18 months of military service as a Sergeant and Squad Leader in the Republic of Korea Army forged uncompromised operational accountability. Managing a squad of 25+ soldiers and coordinating logistics across five military units delivering 800+ daily meals without disruption built the grit, situational adaptability, and collective ownership essential for navigating complex international direct investments.

I would be honored to contribute my analytical rigor, behavioral insights, and long-term stewardship mindset to Temasek's investment team in London. Thank you for your consideration.

Sincerely,

Kyubin Yun
